

EdgeScout's Complete Plug & Play Solution

EdgeScout is a cloud hosted remote monitoring system that does not require the purchase of PCs or software and can be utilized across several different hardware gateways. Our plug and play solution makes installation and set-up quick and easy. An initial registration fee and annual subscription includes comprehensive and secure data storage with access to customized reports, dashboards, and notifications.

RRAMAC's experienced team of engineers will work with your hardware gateway to expertly configure and customize your remote monitoring system. We offer customized reports and dashboards, cloud based analytics, historical trends, and email and text notifications.

We can also provide perpetual access to data for downtime reporting, predictive maintenance, reactive maintenance, and remote inventory tracking.

EDGESCOUT REMOTE MONITORING BENEFITS:

-  Hosted data storage, reports and notifications
-  Predictive maintenance and root cause analysis
-  Customized smartphone apps
-  Streamlined business processes and improved OEE
-  Secure Connectivity via internet or cellular device
